

EXP_02. Set up an Azure DevOps project

AIM:

To set up an Azure DevOps project for efficient collaboration and agile work management.

STEPS:

1. Create an Azure account
2. Create the First Project in Your Organization
 - a. After the organization is set up, you'll need to create your first **project**. This is where you'll begin to manage code, pipelines, work items, and more.
 - b. On the organization's **Home page**, click on the **New Project** button.
 - c. Enter the project name, description, and visibility options:
 - Name:** Choose a name for the project (e.g., **LMS**).
 - Description:** Optionally, add a description to provide more context about the project.
 - Visibility:** Choose whether you want the project to be **Private** (accessible only to those invited) or **Public** (accessible to anyone).
 - d. Once you've filled out the details, click **Create** to set up your first project.

The screenshot shows the 'Create new project' dialog box in Azure DevOps. It has a title bar with a close button (X). The form contains the following fields and options:

- Project name ***: A text input field containing 'PROJECT_01'.
- Description**: A larger text input field, currently empty.
- Visibility**: A section with a lock icon and the word 'Private'. Below it, a note says 'Only people you give access to will be able to view this. Want to create a public project? [Try GitHub](#)'.
- Advanced**: A collapsed section header.
- Version control**: A dropdown menu with 'Git' selected.
- Work item process**: A dropdown menu with 'Basic' selected.
- Buttons**: 'Cancel' and 'Create' buttons at the bottom right.

3. Once logged in, ensure you are in the correct organization. If you're part of multiple organizations, you can switch between them from the top left corner

(next to your user profile). Click on the Organization name, and you should be taken to the Azure DevOps Organization Home page.

4. Project Dashboard

5. To manage user stories:

- From the **left-hand navigation menu**, click on **Boards**. This will take you to the main **Boards** page, where you can manage work items, backlogs, and sprints.
- On the **work items** page, you'll see the option to **Add a work item** at the top. Alternatively, you can find a **+** button or **Add New Work Item** depending on the view you're in. From the **Add a work item** dropdown, select **User Story**. This will open a form to enter details for the new User Story.

RESULT:

Successfully created an azure DevOps project with user story management and Agile workflow setup.
